

At last Classical Music duly supported

Designed for music lovers with little or no computer skills, the Sonata Music Server software is the industry first to properly support Classical Music's complex tagging with the help of a database that support up to 19 metadata fields, this allows the user to sort an album by *Genre, Style, Period, Instrument, Composer, Orchestra, Conductor, Soloists, Title, Track, Year, Label, Catalog number, etc.* User can select from music collection using complex combinations of the 19 fields such as: Show me albums of romantic (Period) music for Piano (Instrument), played by Maurizio Pollini (Soloist).

The top of class built-in CD ripper provides access to metadata from 4 databases (*GD3, SonataDB, FreeDB and MusicBrainz*) thus, achieving superior metadata retrievals results.

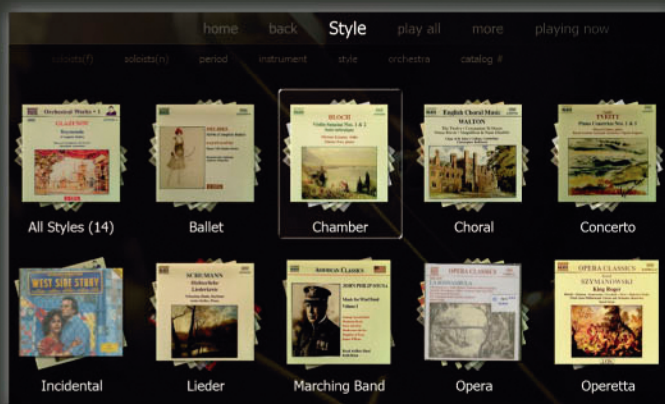

Simple menus, multilanguage and multitouch screen support and a very intuitive and easy-to-use GUI makes the learning curve almost inexistent. Selection and searches can't be easier as the user will always be viewing the covers of the albums/tracks sorted by the criteria they had previously chosen.

If users already have part of their collection in digital format, the "Import and Copy" menus will automatically import the music library to the internal hard disk of the server.

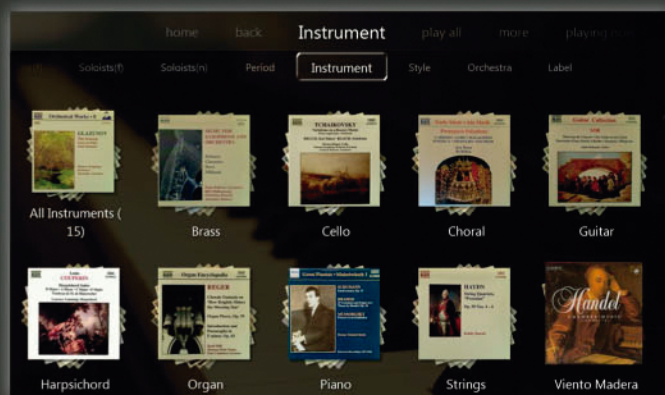

SONATA supports up to 4 audio zones, that means users can listen to up to 4 different music programs in 4 different rooms at a time, or the same music in all rooms.

SONATA supports hi-res audio formats to please the most demanding audiophiles users such as WASAPI and Kernel Streaming and play from memory for a perfect bit plays, thus, becoming a truly audiophiles grade music server that supports up to 24bits-192Khz music files.

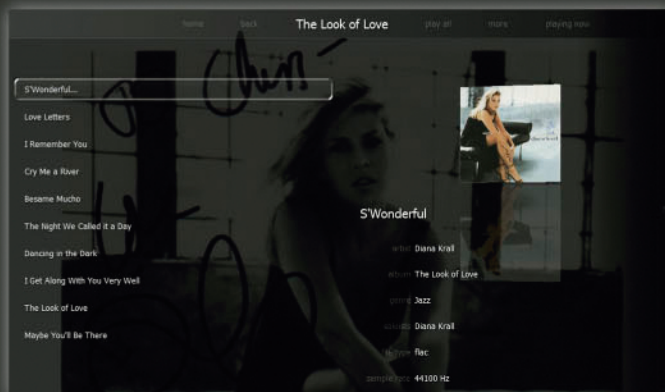

As well, thanks to the DLNA/uPnP server, control point and renderer capabilities, user can stream music via LAN or wirelessly to any DLNA renderer such a low-cost or hi-end streaming player, TV, A/V receiver, etc.

Styles

Instruments

Playing Now

System

- Windows 7, XP, Vista, 32-64 Bits
- Multitouch screen support

Network

- DLNA/UPnP
- DLNA Control Point (DMC)
- DLNA Server (DMS)
- DLNA Renderer (DMR)
- Remote access via Internet

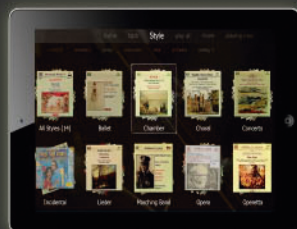

Audio

- Native support for hi-res music files up to 24bits-192KHz
- Automatic sampling frequency switching
- DSP resampling up to 192KHz
- Supported Audio Formats WAV, FLAC, AAC, WMA, ALAC, AIFF, MP3, etc.
- Automatic audio format conversion
- Memory Playback
- Streaming to iPhone™/ iTouch™/ Android™ or any DLNA 1.5 renderer (Optional SW)

Software

- Very easy to use
- Menus in 9 languages (*English, French, German, Italian, Japanese, Portuguese, Russian and Spanish*)
- Ripper: Custom dBpoweramp
- Player & GUI: Custom J. River Media Center
- Metadata: Access to 4 databases: *GD3, SonataDB, Freedb and MusisBrainz*
- Database with 19 fields optimized for classical music
- All Genre Support (Jazz, Pop, Rock, etc.)
- Import of music from external hard disk
- Backup to external hard disk
